

## Application Guide for Lurker Lube

### **Lurker Lube Classic:**

Lurker Lube Classic can be used in **any** application a normal, Dow33 type paintball grease would be used for. It coats parts with PTFE particles and breaks them in over time. It is long lasting but slick. This is particularly targeted at players who want to play a whole tournament without cracking open their gun.

In particular, Lurker Lube Classic is well suited to:

- Regulators
- Static sealing O-rings
- O-rings that are maintained infrequently.

The application for Lurker Lube classic should be very light in most cases – just enough for orings to appear uniformly “wet”.

### **Lurker Lube Juiced:**

Lurker Lube Juiced is a thinner version of Lurker Lube, which allows guns to run at slightly lower pressures and slightly lower temperatures:

Recommended applications:

- Drivetrains of Spool valve markers
- Rams of Stacked tube Poppets

### **Lurker Lube Swole:**

Lurker Lube Swole has polar additives that infiltrate rubber parts and cause them to swell, mimicking the actions of DOW55.

Recommended applications:

- Bob Long Intimidator Drivetrains
- Bob Long Marq Series Drivetrains
